

## In Class exercise

---

### Alert on Account not Found

You are required to update your local git repo in order to get your instructor Angular/**excercise01** directory, you are required to completed the following:

**1.)** Add the necessary code to include an alert whenever the account was not found, that is , whenever the Atm Service has the boolean property validAccount set to false by the SetAccountNumber method.

Here is the bootstrap example:

```
<div class="alert alert-warning">
  <strong>Warning!</strong> The account supplied was
not found.
</div>
```

**2.)** You are required to add the necessary logic to add the PIN validation to the account Finding method in the ATM Web Service and in the Angular Client Application.

Note: Your instructor's GitHub repo is located at  
<https://github.com/marioestradasa/tsbootcamp.git>

If you have cloned it already, then go into your local directory and type git pull.
