Exercise on Router Module

You are required to start a new Angular Project to test your NG Router skills. Import the NG router module and create 3 routes, one of them will be the default one.

The default route can go to the app.component and will present two buttons in the main screen and one Big Title saying "Excersie on router Module".

 You will also need to generate two components sayLight and sayDynamicBold. sayLight will show in a div html the word "Hello World from sayLight. sayDynamicBold will say the argument passed to it using the angular router in bold.

- Button label 1 should be "Say Light"

  • When clicked, navigate to the route for sayLight

- Button label 2 should be "Say Bold"

  • When clicked , navigate to the route for sayDynamicBold and pass a fixed string , anything that you want.
