Angular 2nd . Day Exercise 01

Adding Gets into the **AtmService** Class

Please, implement the following methods inside the AtmService class. You should return any arbitrary value manually as for now , it won't call our web service. Set the result of those methods in variables in the component and display them in the HTML template.

- getAccountBalance(acctNumber : string) : number ;

- getLastTransactionAmount(acctNumber : string) : number;

- withDrawMoney(acctNumber : string, amount : number) : number ;

  - This will return a new balance

- depositMoney(acctNumber : string, amount : number) : number;

  - This will return a new balance
